Device status ready

From HackTheIBus

Description

The Device Status Ready message is a responce to the Device status request message. Device Status Ready is sent to show that a device is present, alive, and responding.

A typical usage of this message is for the CD changer to respond to the radio, so that the radio knows the CD changer is fitted. Only when the CD changer responds, does the radio enable the CD changer options on the user menu.

This message has medium priority. (Priority 2, >2.3ms pause after request)

Format

Message code	0x12
Message length	6 bytes
Data size	1 byte
Frequency	On request

DB1
Status

Status = bit mapped, reason for readiness.

- Bit 0 = After reset
- Bit 2...7 = not used / unknown
